

Centra Line™

Central Venous Catheter Sets

Biometrix offers a broad range of catheter kits and trays for central venous catheterization. We provide safe and reliable devices for a wide variety of clinical interventions. Centra-Line™ enables several procedures to take place simultaneously via a single puncture site: CVP monitoring, continuous and simultaneous infusion, blood sampling, blood product administration and TPN administration.

Customized CVC Packs

- customized drapes
- surgical gowns
- gauze
- swabs
- hypodermic needles
- needle counters

Catheter Tray Contents

- Radiopaque PU catheter
- Guidewire
- Introducer needle / Y-Introducer needle / Super Sharp Echogenic Needle
- 5ml syringe/Quick insertion syringe
- Vessel dilator
- Heparin locks/Needleless valves
- Scalpel

Quantity per adult box: 20/Quantity per pediatric box: 10

Centra Line™ Central Venous Catheter Sets

Kink Resistant Guidewires

The Biometrix Nitinol (kink resistant) guidewires are designed to withstand sharp angles without buckling and coiling, thus facilitating passage of the CVC through the patient's vascular system.

Flex Tip

The geometric tip design along with the high-quality biocompatible material allows a safe and easy insertion and manipulation through the vascular system

Needle Free Valves

Designed to prevent needle stick injuries and reduce infection, the design creates a safe and easy access to the patient. Such a valve can be used with any male luer syringe.

Y-introducer Needle

The Biometrix Y-introducer needle offers a unique design, which allows access to the vein without disconnecting the syringe attached to the needle. The Y-introducer needle has a one-way integral valve for preventing the risk of blood leakage and embolism during insertion.

Quick Insertion Syringe

By using the Biometrix Quick Insertion Syringe the guidewire can be inserted directly into the hollow plunger/barrel, through the introducer needle and into the vascular system. The Quick Insertion Syringe is simpler and faster for the physician, less traumatic for the patient and also serves as a fluid containment device to help protect from infection and cross contamination.
